Experience

Senior Software Engineer | Microsoft (Hybrid Connectivity)

Redmond, WA | **Sep 2023–Present**

- Led development of multimodal RAG feature (C# / JavaScript / Azure AI Search / Semantic Kernel / Azure Foundry) for Microsoft's AI Work Item Assistant, enabling conversion of images (e.g., Figma mockups, wireframes) into Azure DevOps work items; owned end-to-end delivery, enhancing a product used by 26.8K users, driving 168K work items and 111.6K hours saved
- Led a team of 4 to build a cloud-to-on-premises connectivity automation platform (C# / .NET / Azure Functions / SQL DB). Automated policy orchestration across Azure Firewalls and Network Security Groups for 2.5K+ network connections/month, eliminating manual configuration and reducing provisioning time by 2-3 days/request, resulting in 15K+ hours saved annually.
- Led an Infrastructure as Code modernization of Virtual Machine deployments by migrating JSON ARM templates to secure Template Specs (BICEP). Enforced least-privilege access for 1K+ users, eliminated security remediation work, and reduced 50% of deployment time for 2K+ deployments to save 1K hours. Presented to Nestlé and published on Microsoft's Inside Track blog.

Software Engineer II | Microsoft (Cloud Engineering)

Redmond, WA | **Aug 2020–Sep 2023**

- Led frontend development for a web application (React) serving large-scale data transfers (50GB+) for Microsoft and Xbox Game Studios. Delivered features to reduce end-to-end transfer times from days to minutes, enable authorization control across 550+ storage containers, and automate manual processes to save 300+ engineering hours annually.
- Developed a compliance dashboard (React / .NET / Azure APIs) for 7+ Microsoft divisions to visualize Azure security standards across 2.3K+ subscriptions, and eliminate 95% of manual support effort for compliance diagnostics.

Software Engineer Intern | Bloomberg LP (Multi-Asset Viewer)

New York, NY | **May 2019–Jul 2019**

- Developed a collaborative filtering–based recommender (Python / JavaScript) for Bloomberg's portfolio management tool, enhancing Excel-like financial workflows by recommending personalized columns from similar client behavior; improved usability for a platform used by 100K+ clients.

Software Engineer Intern | TripAdvisor (Find and Discover)

Ottawa, Canada | **Jan 2019–Apr 2019**

- Developed Nearby Search and Rescue Search features (JavaScript) for TripAdvisor's desktop landing page, mirroring mobile behavior to provide scoped results (e.g., nearby hotels, activities) and enable seamless switching to unscoped search for a continuous browsing experience, driving ~25K new daily users post-launch.

Software Engineer Intern | Intel Corporation (Programmable Solutions Group)

Toronto, Canada | **May 2018–Dec 2018**

- Led a compile-time reduction initiative for Intel's Quartus software (C++), building a service (Python) using reverse-dependency analysis and a dashboard (JavaScript) to identify high-impact headers; guided refactoring for 300+ engineers to reduce transitive includes, and cut ~5 hours of build time from a pilot subsystem.

Education

Bachelor of Applied Science, Computer Engineering - University of Toronto | CGPA: 3.79

Toronto, Canada | **Sep 2015–May 2020**

- **Hardware Research Intern** - University of British Columbia: Evaluated high-level synthesis tools; sponsored to attend ISCA 2016
- **Director of Business Strategy and Development** - You're Next Career Network: Led a 10-member team, managed 20+ partnerships, generated ~\$20K in revenue, and grew Canada's largest Startup Career Fair (91 startups, 3K+ students).
